AJB Software engaged Trustwave, operating under TrustWave Holdings, Inc. ("Trustwave") to conduct a third party security assessment and determine whether AJB Software has satisfactorily met the Visa Payment Application Best Practice Standard (PABP) security requirements related to the protection of cardholder data. Specifically, the assessment covered the PABP requirements which are articulated within the PABP version 1.4 audit procedures. Trustwave is an authorized third party assessor for Visa payment application assessments.

The following application was evaluated within this assessment:

The scope of the review included the application review of AJB RTS3.2s application including Pathfinder 2.3, FiPay 2.2 and FiPay PIN 2.2

Based upon the information provided by AJB Software to include the implementation documentation and the assessment of the AJB RTS 3.2s payment application, Trustwave has determined that AJB has satisfactorily met the PABP security requirements as of May 2008.

The PABP report has been forwarded to Visa for their review and compliance determination. If Visa determines that the application is compliant, then Visa, in their sole discretion, will list the software vendor and application on their website for up to one year from the date of the report.

If you have any questions concerning this matter, please do not hesitate to contact me at Compliance-QA@trustwave.com. Thank you.

Sincerely,

Christopher Gerg
QA Manager, Compliance
